

## INDUSTRY SCORECARD

Financial Indicator	Current Period	Industry Range	Distance from Industry
<b>Current Ratio</b> = Total Current Assets / Total Current Liabilities  <b>Explanation:</b> Generally, this metric measures the overall liquidity position of a company. It is certainly not a perfect barometer, but it is a good one. Watch for big decreases in this number over time. Make sure the accounts listed in "current assets" are collectible. The higher the ratio, the more liquid the company is.	1.89	1.50 to 2.40	0.00%
<b>Quick Ratio</b> = (Cash + Accounts Receivable) / Total Current Liabilities  <b>Explanation:</b> This is another good indicator of liquidity, although by itself, it is not a perfect one. If there are receivable accounts included in the numerator, they should be collectible. Look at the length of time the company has to pay the amount listed in the denominator (current liabilities). The higher the number, the stronger the company.	1.88	1.00 to 2.00	0.00%
<b>Accounts Receivable Days</b> = (Accounts Receivable / Sales) * 365  <b>Explanation:</b> This number reflects the average length of time between credit sales and payment receipts. It is crucial to maintaining positive liquidity. The lower the better.	79.77 Days	40.00 to 70.00 Days	-13.96%
<b>Accounts Payable Days</b> = (Accounts Payable / COGS) * 365  <b>Explanation:</b> This ratio shows the average number of days that lapse between the purchase of material and labor, and payment for them. It is a rough measure of how timely a company is in meeting payment obligations. Lower is normally better.	55.83 Days	20.00 to 50.00 Days	-11.66%
<b>Gross Profit Margin</b> = Gross Profit / Sales  <b>Explanation:</b> This number indicates the percentage of sales revenue that is not paid out in direct costs (costs of sales). It is an important statistic that can be used in business planning because it indicates how many cents of gross profit can be generated by each dollar of future sales. Higher is normally better (the company is more efficient).	9.66%	10.00% to 21.50%	-3.40%
<b>Net Profit Margin</b> = Adjusted Net Profit before Taxes / Sales  <b>Explanation:</b> This is an important metric. In fact, over time, it is one of the more important barometers that we look at. It measures how many cents of profit the company is generating for every dollar it sells. Track it carefully against industry competitors. This is a very important number in preparing forecasts. The higher the better.	0.93%	0.50% to 6.00%	0.00%
<b>Debt-to-Equity Ratio</b> = Total Liabilities / Total Equity  <b>Explanation:</b> This Balance Sheet leverage ratio indicates the composition of a company's total capitalization -- the balance between money or assets owed versus the money or assets owned. Generally, creditors prefer a lower ratio to decrease financial risk while investors prefer a higher ratio to realize the return benefits of financial leverage.	1.88	1.00 to 2.50	0.00%
<b>Debt Leverage Ratio</b> = Total Liabilities / EBITDA  <b>Explanation:</b> This ratio measures a company's ability to repay debt obligations from annualized operating cash flow (EBITDA).	31.17	N/A	N/A

---

<b>Return on Equity</b> = Net Income / Total Equity	5.53%	8.00% to 20.00%	-30.88%
--	-------	-----------------	---------

**Explanation:** This measure shows how much profit is being returned on the shareholders' equity each year. It is a vital statistic from the perspective of equity holders in a company. The higher the better.

---

<b>Return on Assets</b> = Net Income / Total Assets	1.92%	6.00% to 10.00%	-68.00%
--	-------	-----------------	---------

**Explanation:** This calculation measures the company's ability to use its assets to create profits. Basically, ROA indicates how many cents of profit each dollar of asset is producing per year. It is quite important since managers can only be evaluated by looking at how they use the assets available to them. The higher the better.

---

<b>Fixed Asset Turnover</b> = Sales / Gross Fixed Assets	2.97	1.50 to 6.00	0.00%
---	------	--------------	-------

**Explanation:** This asset management ratio shows the multiple of annualized sales that each dollar of gross fixed assets is producing. This indicator measures how well fixed assets are "throwing off" sales and is very important to businesses that require significant investments in such assets. Readers should not emphasize this metric when looking at companies that do not possess or require significant gross fixed assets. The higher the more effective the company's investments in Net Property, Plant, and Equipment are.

---

**NOTE:** Exceptions are sometimes applied when calculating the Financial Indicators. Generally, this occurs when the inputs used to calculate the ratios are zero and/or negative.

**READER:** Financial analysis is not a science; it is about interpretation and evaluation of financial events. Therefore, some judgment will always be part of our reports and analyses. Before making any financial decision, always consult an experienced and knowledgeable professional (accountant, banker, financial planner, attorney, etc.).
